

CSC 369 Worksheet 2 Solution

August 16, 2020

1 Homework (Simulation)

1. I need to create process trees at each step when the command `./fork.py -s 10` is run.

1) Action: a forks b

2) Action: a forks c

3) Action: c EXITS

4) Action: a forks d

5) Action: a forks e

Notes

- **fork()**
 - Is used to create a new process
 - **Creator** → parent process
 - **Newly Created** → child process
 - Child process is nearly identical to parent process
- **exec()**
 - Allows a child to break free from its similarity to its parent and execute an entirely new program.
- **wait()**
 - Is used to let parent code delay its execution until the child finishes executing.
 - Makes the output deterministic

2 Homework (Code)

1.
