

1. a) Notes• **System Call**

- Are interrupt signals sent by software
- Is a programmatic way of a program requesting for service to kernel of operating system
- i.e. Accessing a hard-disk drive
- Transfers control into the OS while simultaneously raising **hardware privilege level**

• **Tranp Instruction**

- Is executed when a user wants to invoke a service from the operating system (i.e. reading hard drive)

• **Trap**

- Is a special hardware instruction
