

CSC373 Worksheet 1 Solution

July 16, 2020

1. Notes:

- Strassen's method for matrix multiplication
 - Reduces the time complexity of matrix multiplication from $O(n^3)$ to $O(n^{\log_2 7}) = O(n^{2.81})$
 - Is not preferred in practical purposes
 - 1) The constants used in Strassen's method are high and for a typical application Naive method works better.
 - 2) For Sparse matrices, there are better methods especially designed for them.
 - 3) The submatrices in recursion take extra space.
 - 4) Because of the limited precision of computer arithmetic on noninteger values, larger errors accumulate in Strassen's algorithm than in Naive Method
