

## 1. Secondary Storage Devices

- 

## 2. Disk Components

- Parts
  - **Platter:**
    - \* Data can be stored in both upper and lower parts of the platter
  - **Cylinder:**
    - \* Is a set of tracks that can be read without moving the arm
  - **Sector:**
    - \* Size of disk block is multiple of sectors
- Disk arm touching surface → disk surface crash

## 3. Disk Performance

**IMPORTANT** We should know the bulk part time of how this works

- **Seek:**
  - Is the time it takes to move the disk arm to correct cylinder
  - Depends on how fast disk arm can move
  - Typical time: 1-15ms, depending on distance (avg 5-6 ms)
- **Rotation:**

- Is the time it takes to rotate under the head to get to correct sector
- Average latency of  $\frac{1}{2}$  rotation
- Depends on rotation rate of disk

- **Transfer:**

- Is the time it takes to transfer data from surface to disk controller, electronics and sending it back to host
- Depends on density
- Is improving rapidly

#### 4. **Track Skew**

- Is to reduce rotational latency
