

CSC 369 Worksheet 6 Solution

August 20, 2020

1. Done. See link [here](#)
2. I need to find out how much memory is in my system, and how much is free.

Running the command `free -m`, we have

```
ubuntu@primary:~$ free -m
              total        used        free      shared  buff/cache   available
Mem:           981         157         131           0         691         668
Swap:           0           0           0
```

Using this information, I can write that the computer has

- 981 MB of total memory
- 131 MB of free memory

Notes

- Installing Ubuntu Virtual Machine link: [here](#)
- Start virtual machine by typing command `multipass start ubuntu-lts`
