

CSC343 Worksheet 15 Solution (Final)

July 15, 2020

1.
 - E/R Diagram

- UML

Notes:

- UML
 - Was developed originally as a graphical notation for describing software designs in an object-oriented style
 - Offers the same as E/R model, with the exception of multiway relationship

UML	E/R Model
Class	Entity set
Association	Binary relationship
Association Class	Attributes on a relationship
Subclass	Isa hierarchy
Aggregation	Many-one relationship
Composition	Many-one relationship with referential integrity

- UML Class

- Associations

Multiplicity in UML

Multiplicity	Option	Cardinality
0..0	0	Collection must be empty
0..1		No instances or one instance
1..1	1	Exactly one instance
0..*	*	Zero or more instance
5..5	5	Exactly 5 instances
$m..n$		At least m but no more than n instances

Example:

Two or more Player actors are required to initiate **one** Play Game use case.

References:

- 1) uml-diagrams, UML Multiplicity and Collections, link
- Referential Integrity
 - Means that a value appearing in one context must also appear in another

Means studio can have **at most one** president
but it could not have a president at some time

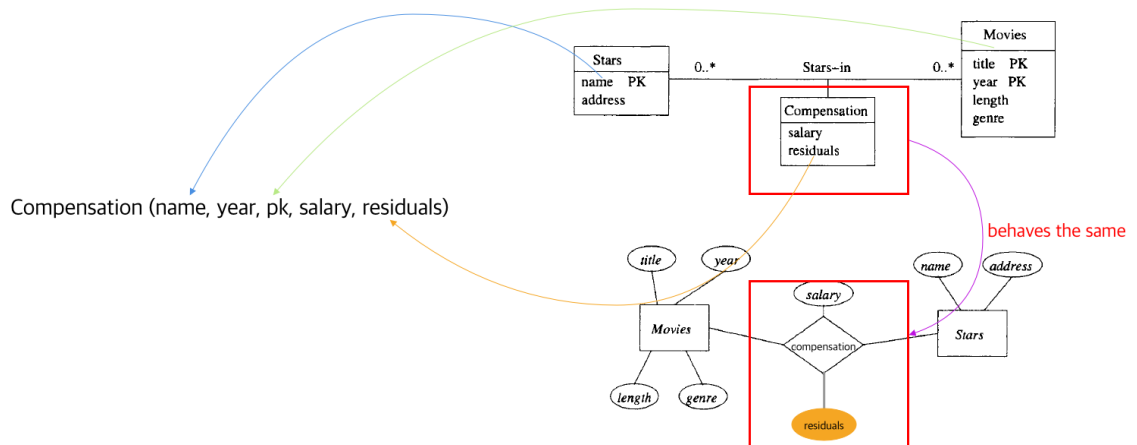

Means one studio can have **at least one** movies
and there could have many more (to infinity!)

- Self-Associations

is the same

- Associations

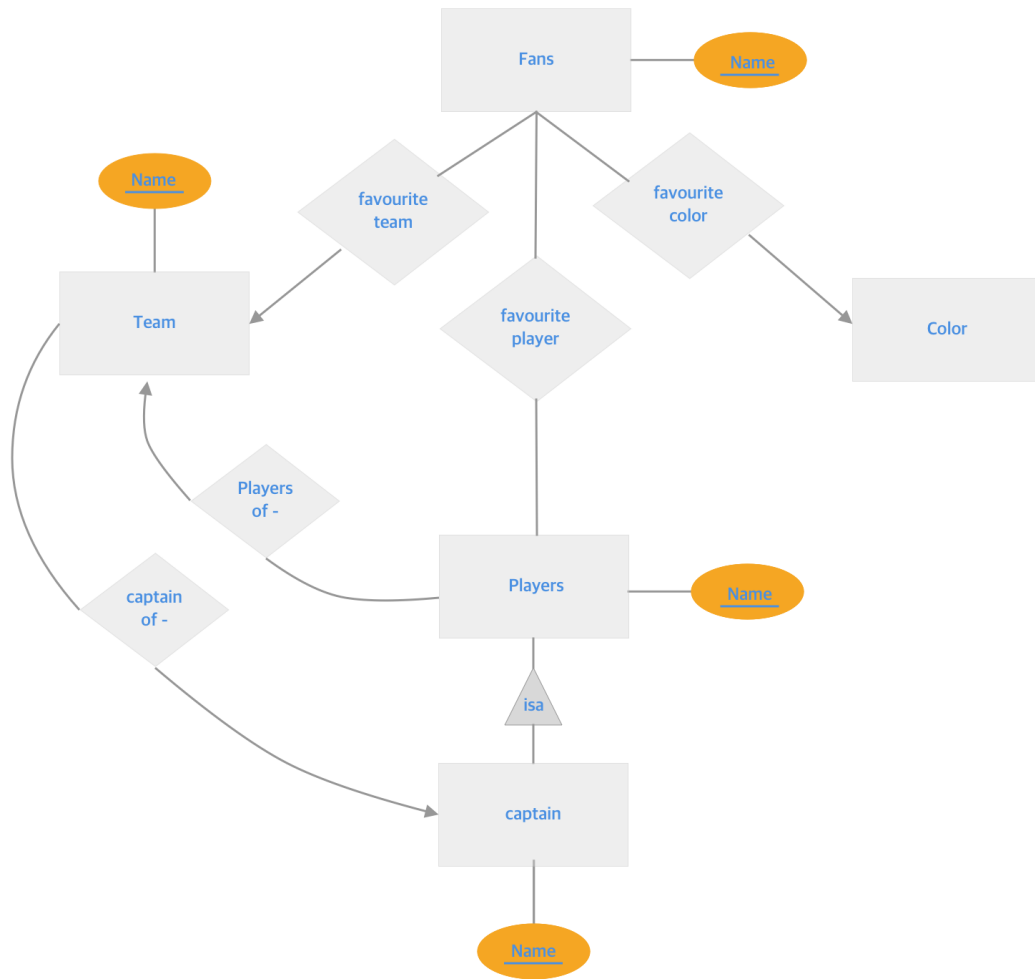

2. a) Solution:

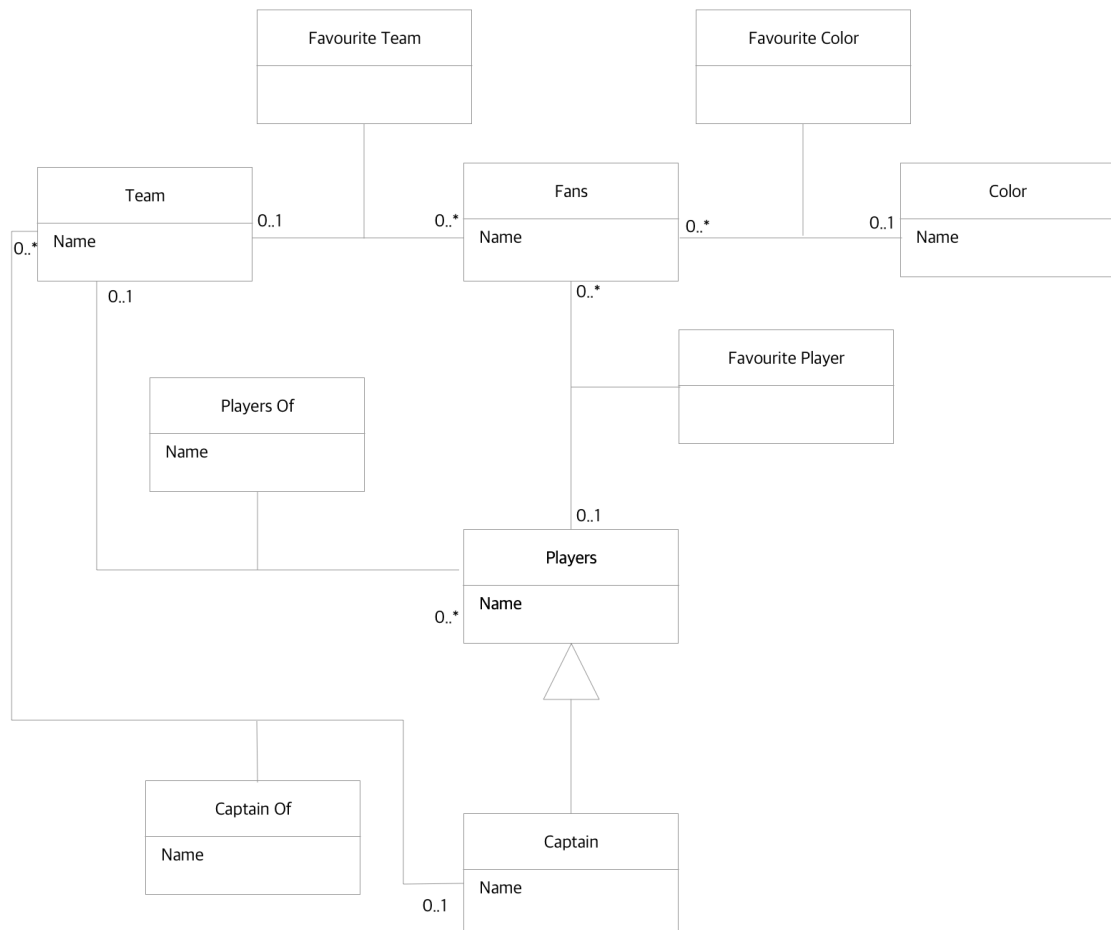

b) Solution:

3. • E/R Diagram

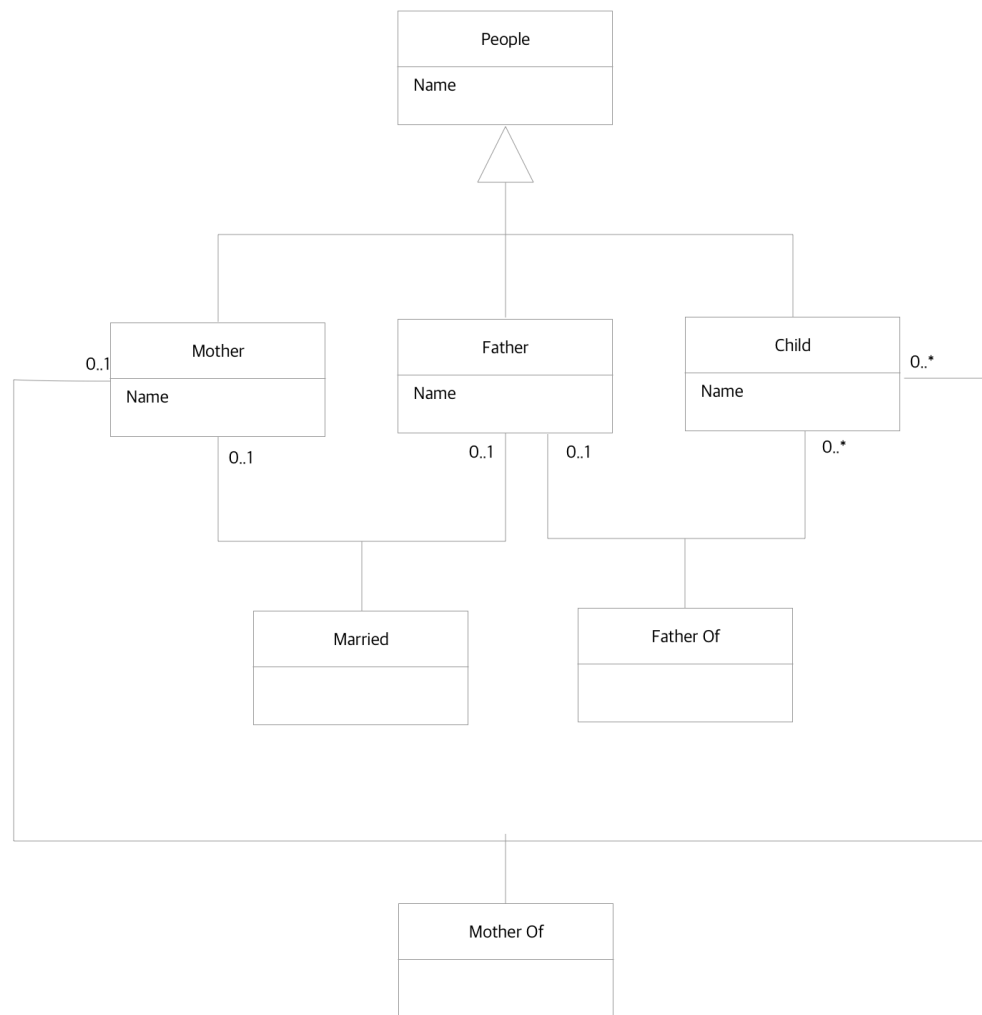

- UML

4. • E/R Diagram

- UML

5. • E/R Diagram

- UML

6. • E/R Diagram

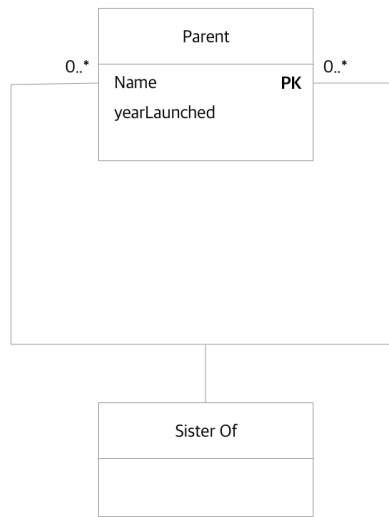

- UML

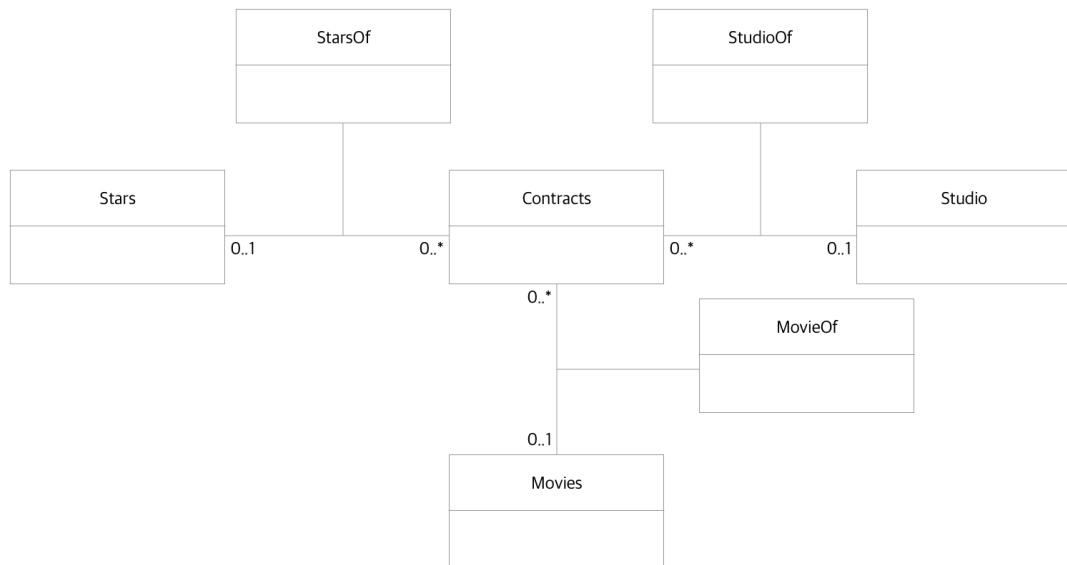

7. • E/R Diagram

• UML

8. • UML

9.

a) **Solution:**

- E/R Model

- UML

**Correct Solution:**

- E/R Model

- UML

**Notes:**

- An N-ary association is equivalent to one “central” class and N binary associations connecting the central class to the participant classes of the N-ary association

**b) Solution:**

- E/R Model

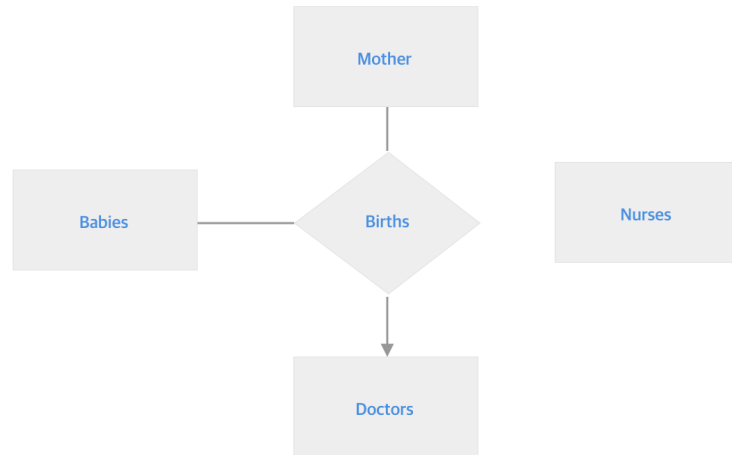

- UML

c) **Solution:**

- E/R Model

- UML
