

1. No. if the access is read for both threads, then concurrency error will not occur.
2. b) , c) and d) are true

Correct solution

c) and d) are true

Notes

Question What does it mean when mutex is held by this thread?

Question What I do know is that `pthread_cond_wait` puts thread to sleep. My question here is, how come the mutex is not held when thread is in a blocked state/sleep?

3. a) Only b) causes starvation.
- b) There is nothing to free inside the
