CSC 209 Review 8 Solution

September 10, 2020

```
int *my_malloc (int n) {
    int *res;

res = malloc(n * sizeof(int));
    if (res == NULL) {
        perror("Allocation failed.");
    }

return res;
}
```

Please see question_1.c for details.

```
2_1
       char *duplicate(char *str) {
           char *res;
3
           res = malloc(strlen(str) + 1);
           if (res == NULL) {
5
               return res;
6
8
           strcpy(res, str);
9
10
           return res;
11
12
```

Please see question_2.c for details.

```
int *create_array(int n, int initial_value) {
   int *p, *res;

res = malloc(n * sizeof(int));

if (res == NULL) {
   return res;
}
```

CSC 209 Review 8 Solution

```
for (p = res; p < res + n; p++) {
         *p = initial_value;
}

return res;
}</pre>
```

Please see question_3.c for details.

```
4_1
           int main(void) {
               struct point {int x, y};
               struct rectangle {struct point upper_left, lower_right};
3
               struct rectangle *p;
               p = malloc(sizeof(struct rectangle));
6
               p.upper_left.x = 10;
8
               p.upper_left.y = 25;
9
10
               p.lower_right.x = 20;
11
               p.lower_right.y = 15;
12
13
               printf("%d %d\n", p.upper_left.x, p.upper_left.y);
14
               printf("%d %d\n", p.lower_right.x, p.lower_right.y);
16
               free(p);
17
18
               return 0;
           }
20
21
```

Please see question_4.c for details.

5. b), c) and d) are legal.

```
Correct Solution

b), c) are legal.
```

<u>Notes</u>

- The -> Operator
 - doesn't carry over to accessing nested members. Only works when struct is a pointer

Example

```
p->upper_left.x
```
