University of Toronto Faculty of Arts and Science

CSC165H1S Midterm 1, Version 1

Date: February 6, 2019 Duration: 75 minutes Instructor(s): David Liu, François Pitt

No Aids Allowed

Name:												
Studen	t Numb	er:										

- This examination has 4 questions. There are a total of 8 pages, DOUBLE-SIDED.
- All statements predicate logic must have negations applied directly to propositional variables or predicates.
- You may not define your own propositional operators, predicates, or sets, unless asked to do so in the question.
 Please work with the symbols we have introduced in lecture, and any additional definitions provided in the questions.
- Proofs should follow the guidelines used in the course (e.g., explicitly introduce all variables, clearly state all assumptions, justify every deduction in your proof body, etc.)
- In your proofs, you may always use definitions from the course. However, you may **not** use any external facts about these definitions unless the yare given in the question.
- You may **not** use induction for your proofs on this midterm.

Take a deep breath.

This is your chance to show us
How much you've learned.
We **WANT** to give you the credit
That you've earned.
A number does not define you.

Good luck!

Question	Grade	Out of
Q1		8
Q2		7
Q3		6
Q4		5
Total		26

1. [8 marks] Short answers questions.

- (a) [2 marks] Let $U = \{a, b, c\}$. Let S_1 be the set of strings over U whose first two letters are the same, and let S_2 be the set of strings over U with length 3. Write down all the elements of $S_1 \cap S_2$.
- (b) [3 marks] Write down the truth table for the following expression in propositional logic. Rough work (e.g., intermediate columns of the truth table) is **not** required, but can be included if you want.

$$(p \lor q) \Rightarrow \neg r$$

(c) [3 marks] Consider the following statement (assume predicates P and Q have already been defined):

$$\forall x \in \mathbb{N}, \ \exists y \in \mathbb{N}, \ P(x,y) \lor Q(x,y)$$

Suppose we want to **disprove** this statement. Write the complete $proof\ header$ for a disproof; you may write statements like "Let $x = \underline{\hspace{1cm}}$ " without filling in the blank. The last statement of your proof header should be "We will prove that..." where you clearly state what's left to prove, in the same style as the lectures or the Course Notes.

You do not need to include any other work (but clearly mark any rough work you happen to use).

	CSC165H1S , Winter 2019	Midterm 1, Version 1						
3.	[6 marks] A proof about numbers. Consider the following st a divides b and b divides c , then a divides c ."	wing statement: "For every three integers $a, b,$ and $c,$ if						
	(a) [2 marks] Translate the above statement into predicate legislate instead use the definition of divisibility.	egic. Do not use the divisibility predicate $ $, but						
	(b) [4 marks] Prove or disprove the above statement. If you of by writing its negation. We have left you space for rough formal proof in the box below.							
	Proof.							

Proof.

4. [5 marks] Floors and Ceilings. We have the following facts about the floor of a number.

$$\forall x \in \mathbb{R}, \ \exists \varepsilon \in \mathbb{R}, \ 0 \le \varepsilon < 1 \land x = \lfloor x \rfloor + \varepsilon \tag{Fact 1}$$

$$\forall n \in \mathbb{Z}, \ \forall s \in \mathbb{R}, \ |n+s| = n+|s|$$
 (Fact 2)

Use these facts to prove the following statement:

$$\forall x, y \in \mathbb{R}, \ \lfloor x + y \rfloor \ge \lfloor x \rfloor + \lfloor y \rfloor$$

Clearly state where you use each fact in your proof. We have left you space for rough work here and on the next page, but write your formal proof in the box below. HINT: Substitute appropriate expressions for x and y in $\lfloor x+y \rfloor$.

CSC165H1S , Winter 2019			Midterm 1, Version	<u>n 1</u>
Use this page for rough work. If you location of the original question.	want work on this	page to be marked,	please indicate this cl	early at the
