Worksheet 5 Review 2

April 13, 2020

Question 1

• Statement: $\forall m, n \in \mathbb{Z}, (\exists k_1 \in \mathbb{Z}, m = 2k_1 + 1) \land (\exists k_2 \in \mathbb{Z}, n = 2k_2 + 1) \Rightarrow (\exists k_3 \in \mathbb{Z}, mn = 2k_3 + 1)$

Proof. Let $m, n \in \mathbb{Z}$. Assume there is an integer k_1 such that $m = 2k_1 + 1$. Assume there is an integer k_2 such that $n = 2k_2 + 1$. Let $k_3 = (2k_1k_2) + k_1 + k_2$.

We need to prove $mn = 2k_3 + 1$.

The assumption tells us $m = 2k_1 + 1$ and $n = 2k_2 + 1$.

By using these facts and then multiplying them together, we can conclude

$$mn = (2k_1 + 1)(2k_2 + 1) (1)$$

$$=4k_1k_2+2k_1+2k_2+1\tag{2}$$

$$=2[(2k_1k_2)+k_1+k_2]+1 (3)$$

$$=2k_3+1\tag{4}$$

Notes:

- Noticed professor pre-calculates the value of k_3 as roughwork before writing proof

Question 2

a. Predicate Logic: $\forall m, n \in \mathbb{Z}, Even(m) \land Odd(n) \Rightarrow m^2 - n^2 = m + n$

Predicate Logic Expanded: $\forall m, n \in \mathbb{Z}, \ (\exists k_1 \in \mathbb{Z}, \ m = 2k_1) \land (\exists k_2 \in \mathbb{Z}, \ n = 2k_2 + 1) \Rightarrow m^2 - n^2 = m + n$

b. The value of k used for m and n must not be under the same variable.

Question 3

a. $Dom(f,g): \forall n \in \mathbb{N}, \ g(n) \leq f(n), \text{ where } f,g: \mathbb{N} \to \mathbb{R}^{\geq 0}$

Notes:

• Definition of is Dominated By: Let $f, g : \mathbb{N} \to \mathbb{R}^{\geq 0}$. We say that g is is dominated by f (or f dominates g) when for every natural number $n, g(n) \leq f(n)$.

Question 4
