CSC343 Worksheet 5 Solution

June 20, 2020

1. a)
```
CREATE TABLE MovieExec (
    name CHAR(30),
    address VARCHAR(255),
    cert# INT PRIMARY KEY,
    FOREIGN KEY (cert#) REFERENCES Movies(producerC#)
);
```

Example:

- Foreign-key
  - **Syntax 1:** FOREIGN KEY (< attributes >) REFERENCES < table >(< attributes >)
  - **Syntax 2:** REFERENCES < table >(< attributes >)
  - Binds an attribute of one relation to an anttribute in another table
  - Added when creating table

  Example:

  ```
  // Example 1
  CREATE TABLE Studio (
      name CHAR(30) PRIMARY KEY,
      address VARCHAR(255),
      presC# INT REFERENCES MovieExeC(cert#)
  );

  // Example 2
  CREATE TABLE Studio (
      name CHAR(30) PRIMARY KEY,
      address VARCHAR(255),
      presC# INT,
      FOREIGN KEY (presC#) REFERENCES MovieExec(cert#)
  );
  ```

b)
```
1    CREATE TABLE Movies (
2        title CHAR(30) PRIMARY KEY,
3        year INT PRIMARY KEY,
4        length INT,
5        genre VARCHAR(255),
6        studioName VARCHAR(255),
7        producerC# PRIMARY KEY
8    );
9
```

c) No change required. Violation occurs by the default policy.

```
1    CREATE TABLE MovieExec (
2        name CHAR(30),
3        address VARCHAR(255),
4        cert# INT PRIMARY KEY,
5        FOREIGN KEY (cert#) REFERENCES Movies(producerC#)
6    );
7
```

Correct Solution:

```
1    CREATE TABLE MovieExec (
2        name CHAR(30),
3        address VARCHAR(255),
4        cert# INT PRIMARY KEY,
5        FOREIGN KEY (cert#) REFERENCES Movies(producerC#)
6            ON UPDATE CASCADE // Correction
7            ON DELETE CASCADE // Correction
8    );
9
```

Notes:

- Maintaining Referential Integrity
    - Three different types of policies exist on Foreign Key
        1. *The Default Policy: Reject Violating Modifications.*
            * Is default policy
            * Rejects any modification violating referential integrity constant
        2. *The Cascade Policy*
            * Changes to the referenced attributes are mimicked at foreign key.
            * e.g. delete a tuple in **MovieExec**, deletes related referencing tuple(s) from **Studio**
        3. *The Set-Null Policy*
            * When a modification to the referenced relation affects a foreign-key value, the latter is changed to NULL.

* This applies to both UPDATE and DELETE

Example:

```
 1    CREATE TABLE Movies (
 2        title CHAR(30) PRIMARY KEY,
 3        year INT PRIMARY KEY,
 4        length INT,
 5        genre VARCHAR(255),
 6        studioName VARCHAR(255),
 7        producerC# REFERENCES MovieExec(cert#)
 8            ON DELETE SET NULL
 9            ON UPDATE CASCADE
10    );
11
```

d)
```
 1    CREATE TABLE Movies (
 2        title CHAR(30) PRIMARY KEY,
 3        year INT PRIMARY KEY,
 4        length INT,
 5        genre VARCHAR(255),
 6        studioName VARCHAR(255),
 7        producerC# VARCHAR(255)
 8        FOREIGN KEY (title) REFERENCES StarsIn(movieTitle)
 9    );
10
```

e)
```
 1    CREATE TABLE StarsIn (
 2        movieTitle CHAR(30) PRIMARY KEY,
 3        movieYear INT PRIMARY KEY,
 4        starName VARCHAR(255) PRIMARY KEY,
 5        FOREIGN KEY (starName) REFERENCES MovieStar(name)
 6            ON DELETE CASCADE
 7    );
 8
```

2. Yes. Set foreign-key constraint on StarsIn's movietitle to Movie's title.

```
 1    CREATE TABLE Movies (
 2        title CHAR(30) PRIMARY KEY,
 3        year INT PRIMARY KEY,
 4        length INT,
 5        genre VARCHAR(255),
 6        studioName VARCHAR(255),
 7        producerC# VARCHAR(255),
 8        FOREIGN KEY (title) REFERENCES StarsIn(movieTitle)
 9    );
10
```

3.
```
1     CREATE TABLE Product (
2         maker CHAR(30),
3         model INT PRIMARY KEY,
4         type VARCHAR(255)
5     );
6
7     CREATE TABLE PC (
8         model INT PRIMARY KEY,
9         speed FLOAT,
10        ram INT,
11        hd INT,
12        price FLOAT,
13        FOREIGN KEY (model) REFERENCES Product(model)
14    );
15
16    CREATE TABLE Laptop (
17        model INT PRIMARY KEY,
18        speed FLOAT,
19        ram INT,
20        hd INT,
21        screen INT,
22        price FLOAT,
23        FOREIGN KEY (model) REFERENCES Product(model)
24    );
25
26    CREATE TABLE Printer (
27        model INT PRIMARY KEY,
28        color BOOLEAN,
29        type VARCHAR(255),
30        price FLOAT,
31        FOREIGN KEY (model) REFERENCES Product(model)
32    );
33
34
```

Correct Solution:

```
1     CREATE TABLE Product (
2         maker CHAR(30),
3         model INT PRIMARY KEY,
4         type VARCHAR(255)
5     );
6
7     CREATE TABLE PC (
8         model INT PRIMARY KEY,
9         speed FLOAT,
10        ram INT,
11        hd INT,
12        price FLOAT,
13        FOREIGN KEY (model) REFERENCES Product(model)
14            ON DELETE CASCADE
```

```
15              ON UPDATE CASCADE
16     );
17
18     CREATE TABLE Laptop (
19          model INT PRIMARY KEY,
20          speed FLOAT,
21          ram INT,
22          hd INT,
23          screen INT,
24          price FLOAT,
25          FOREIGN KEY (model) REFERENCES Product(model)
26              ON DELETE CASCADE
27              ON UPDATE CASCADE
28     );
29
30     CREATE TABLE Printer (
31          model INT PRIMARY KEY,
32          color BOOLEAN,
33          type VARCHAR(255),
34          price FLOAT,
35          FOREIGN KEY (model) REFERENCES Product(model)
36              ON DELETE CASCADE
37              ON UPDATE CASCADE
38     );
39
40
```

4.
```
1     CREATE TABLE Classes (
2          class CHAR(255) PRIMARY KEY,
3          type CHAR(2),
4          country CHAR(255),
5          numGuns INT,
6          bore INT,
7          displacement INT
8     );
9
10     CREATE TABLE Ships (
11          name CHAR(255) PRIMARY KEY,
12          class CHAR(255),
13          launched DATE,
14          FOREIGN KEY (class) REFERENCES Classes(class)
15              ON DELETE CASCADE
16              ON UPDATE CASCADE
17     );
18
19     CREATE TABLE Battles (
20          name CHAR(255) PRIMARY KEY,
21          date DATE
22     );
23
24     CREATE TABLE Outcome (
25          ship CHAR(255),
26          battle CHAR(255),
```

```
27          result CHAR(7),
28          PRIMARY KEY (ship, battle, result),
29          FOREIGN KEY (battle) REFERENCES Battles(name),
30              ON DELETE CASCADE
31              ON UPDATE CASCADE
32          FOREIGN KEY (ship) REFERENCES Ships(name),
33              ON DELETE CASCADE
34              ON UPDATE CASCADE
35      );
36
37
```

5. a)
```
1       CREATE TABLE Classes (
2           class CHAR(255) PRIMARY KEY,
3           type CHAR(2),
4           country CHAR(255),
5           numGuns INT,
6           bore FLOAT(3),
7           displacement INT
8       );
9
10      CREATE TABLE Ships (
11          name CHAR(255) PRIMARY KEY,
12          class CHAR(255),
13          launched DATE,
14          FOREIGN KEY (class) REFERENCES Classes(class)
15              ON DELETE CASCADE
16              ON UPDATE CASCADE
17      );
18
```

b)
```
1       CREATE TABLE Battles (
2           name CHAR(255) PRIMARY KEY,
3           date DATE
4       );
5
6       CREATE TABLE Outcome (
7           ship CHAR(255),
8           battle CHAR(255),
9           result CHAR(7),
10          PRIMARY KEY (ship, battle, result),
11          FOREIGN KEY (battle) REFERENCES Battles(name),
12              ON DELETE CASCADE
13              ON UPDATE CASCADE
14      );
15
```

c)
```
1       CREATE TABLE Ships (
2           name CHAR(255) PRIMARY KEY,
3           class CHAR(255),
4           launched DATE,
5           FOREIGN KEY (class) REFERENCES Classes(class)
6               ON DELETE CASCADE
```

```
7              ON UPDATE CASCADE
8       );
9
10      CREATE TABLE Outcome (
11          ship CHAR(255),
12          battle CHAR(255),
13          result CHAR(7),
14          PRIMARY KEY (ship, battle, result),
15          FOREIGN KEY (battle) REFERENCES Battles(name),
16              ON DELETE CASCADE
17              ON UPDATE CASCADE
18          FOREIGN KEY (ship) REFERENCES Ships(name),
19              ON DELETE CASCADE
20              ON UPDATE CASCADE
21      );
22
```

6. a)
```
1       Movies(title, year, length, genre, studioName, producerC#)
2
3       CREATE TALBE Movies (
4           ...
5           year INT PRIMARY KEY CHECK (year >= 1915),
6           ...
7       );
8
```

Notes:

- CHECK Constraints
  - sets conditions that must hold for every value of an attribute

    ```
    1           // Example 1
    2           Studio(name, address, pressC#)
    3
    4
    5           CREATE TALBE Studio (
    6               ...
    7               presC# INT REFERENCES MovieExec(cer#)
    8                   CHECK (presC# >= 10000)
    9           );
    10
    11          // Example 2
    12          MovieStar(name, address, gender, birthdate)
    13
    14          CREATE TALBE MovieStar (
    15              ...
    16              gender CHAR(1) CHECK (gender IN ('F', 'M')),
    17              ...
    18          );
    19
    ```

b)
```
Movies(title, year, length, genre, studioName, producerC#)

CREATE TALBE Movies (
    ...
    length INT CHECK (length > 250 AND length < 60),
    ...
);
```

c)
```
Movies(title, year, length, genre, studioName, producerC#)

CREATE TALBE Movies (
    ...
    studioName VARCHAR(255) CHECK (studioName IN ('Disney', 'Fox', 'MGM', 'Paramount')),
    ...
);
```

7. a)
```
CREATE TABLE Laptop (
    ...
    speed FLOAT CHECK (speed >= 2.0),
    ...
);
```

b)
```
CREATE TABLE Printer (
    ...
    type VARCHAR(255) CHECK (type IN ('laser', 'ink-jet', 'bubble-jet')),
    ...
);
```

c)
```
CREATE TABLE Product (
    maker CHAR(30),
    model INT PRIMARY KEY,
    type VARCHAR(255) CHECK (type IN ('pc', 'laptop', 'printer'))
);
```

d)
```
CREATE TABLE Product (
    ...
    model INT PRIMARY KEY CHECK (type IN (
        (SELECT model FROM PC)
        UNION
        (SELECT model FROM Laptop)
        UNION
        (SELECT model FROM Printer)
    )),
    ...
);
```

8. a)
```
1    CREATE TABLE MovieStar (
2        name CHAR(255) PRIMARY KEY,
3        address VARCHAR(255),
4        gender CHAR(1),
5        birthdate DATE,
6        CHECK (strftime('%Y', birthdate) <= (
7            SELECT movieYear FROM StarsIn WHERE starName = name
8        ))
9    );
10
11   CREATE TABLE StarsIn (
12       movieTitle VARCHAR(255) PRIMARY KEY,
13       movieYear INT PRIMARY KEY,
14       starName VARCHAR(255) PRIMARY KEY,
15       CHECK (movieYear >= (
16           SELECT strftime('%Y', birthdate) FROM MovieStar WHERE
     starName = name
17       ))
18   );
19
```

b)
```
1    CREATE TABLE Studio (
2        name CHAR(255) PRIMARY KEY,
3        address VARCHAR(255),
4        presC# INT,
5        UNIQUE KEY (address)
6    );
7
```

c)
```
1    CREATE TABLE MovieStar (
2        name CHAR(255) PRIMARY KEY,
3        address VARCHAR(255),
4        gender CHAR(1),
5        birthdate DATE,
6        CHECK (name NOT IN (
7            SELECT name FROM MovieExec
8        ))
9    );
10
11   CREATE TABLE MovieExec (
12       name CHAR(255) PRIMARY KEY,
13       address VARCHAR(255),
14       cert# INT,
15       netWorth INT,
16       CHECK (name NOT IN (
17           SELECT name FROM MovieStar
18       ))
19   );
20
```

d)
```
1    CREATE TABLE Studio (
2        name CHAR(30) PRIMARY KEY,
3        address VARCHAR(255),
```

```
 4          presC# INT REFERENCES MovieExeC(cert#),
 5          CHECK (name IN (
 6              SELECT studioName FROM Movies
 7          ))
 8      );
 9
10      CREATE TABLE Movies (
11          title CHAR(30) PRIMARY KEY,
12          year INT PRIMARY KEY,
13          length INT,
14          genre VARCHAR(255),
15          studioName VARCHAR(255),
16          producerC# PRIMARY KEY,
17          CHECK (studioName IN (
18              SELECT name FROM Studio
19          ))
20      );
21
```

9. a)
```
 1      CREATE TABLE PC (
 2          model INT PRIMARY KEY,
 3          speed FLOAT,
 4          ram INT,
 5          hd INT,
 6          price FLOAT,
 7          CHECK (speed < 2.0 AND price <= 600)
 8      );
 9
```

b)
```
 1      CREATE TABLE Laptop (
 2          model INT PRIMARY KEY,
 3          speed FLOAT,
 4          ram INT,
 5          hd INT,
 6          screen INT,
 7          price FLOAT,
 8          CHECK (screen < 15 AND (hd >= 40 OR price < 1000))
 9      );
10
```

10. a)
```
 1      CREATE TABLE Classes (
 2          class CHAR(255) PRIMARY KEY,
 3          type CHAR(2),
 4          country CHAR(255),
 5          numGuns INT,
 6          bore INT,
 7          displacement INT,
 8          CHECK (bore <= 16)
 9      );
10
```

b)
```
1   CREATE TABLE Classes (
2       class CHAR(255) PRIMARY KEY,
3       type CHAR(2),
4       country CHAR(255),
5       numGuns INT,
6       bore INT,
7       displacement INT,
8       CHECK (numGuns > 9 AND bore <= 14)
9   );
10
```

c)
```
1   CREATE TABLE Ships (
2       name CHAR(255) PRIMARY KEY,
3       class CHAR(255),
4       launched INT,
5       CHECK (launched <= (
6           SELECT strftime('%Y', date) FROM Battles
7           INNER JOIN Outcomes ON Battles.name = Outcomes.battle
8           WHERE ship = Ships.name
9       ))
10  );
11
```

11. *gender ≠ NULL*

12. a) ALTER TABLE Movies ADD PRIMARY KEY(title, year);

b)
```
1   ALTER TABLE Movies ADD CHECK (producerC# IN (
2       SELECT cert# IN MovieExec
3   ));
4
```

Correct Solution:

```
1    ALTER TABLE MovieExec ADD FOREIGN KEY (producerC#) REFERENCES
     MovieExec(cert#)
2
```

c)
```
1   ALTER TABLE Movies ADD CHECK (NOT (length < 60 OR length > 250));
2
```

d)
```
1   ALTER TABLE MovieExec ADD CHECK (name NOT IN (
2       SELECT name FROM MovieStar
3   ));
4
5   ALTER TABLE MovieStar ADD CHECK (name NOT IN (
6       SELECT name FROM MovieExec
7   ));
8
```

e)
```
ALTER TABLE Studios ADD UNIQUE (address);
```

13. a)
```
ALTER TABLE Classes ADD PRIMARY KEY (class, country);
```

b)
```
ALTER TABLE Outcomes ADD FOREIGN KEY (battle) REFERENCES Battles(
    name);
```

c)
```
ALTER TABLE Outcomes ADD FOREIGN KEY (ship) REFERENCES Ships(name
    );
```

d)
```
ALTER TABLE Classes ADD CHECK (NOT (numGuns > 14));
```

e)
```
ALTER TABLE Classes ADD CHECK (launched <= (
    SELECT strftime('%Y', date) FROM Battles
    INNER JOIN Outcomes ON Battles.name = Outcomes.battle
    WHERE ship = Ships.name
));
```

14. a)
```
CREATE ASSERTION PCnoLaptop CHECK
    (NOT EXISTS
        (
            (SELECT maker FROM Product type='laptop')
            INTERSECT
            (SELECT maker FROM Product type='pc')
        )
    );
```

Notes:

- Assertion
  - **Syntax:** CREATE ASSERTION < assertion-name > CHECK (< condition >)
  - Creates check conditions
  - Can include subqueries
  - Covers all conditions

  ### Example:

```
1        CREATE ASSERTION RichPres CHECK
2            (NOT EXISTS
3                (
4                    SELECT Studio.name
5                    FROM Studio, MovieExec
6                    WHERE presC# = cert# AND netWorth < 10000000
7                )
8            );
9
```

b)
```
1    CREATE ASSERTION laptopGteSpeed (
2        EXISTS(

    Ships.name
11              ) WHERE numGuns > 9 AND result = 'sunk'
12          )
13      );
14
```

d)
```
1   CREATE ASSERTION shipMustHaveFirstShipClassNameFirst (
2       NOT EXISTS (
3           SELECT * FROM Ships AS s1
4           WHERE s1.class <> s1.name AND s1.launched <= ALL (
5               SELECT launched FROM Ships AS s2 WHERE s2.class = s1.
    class
6           )
7       )
8   );
```

14

```
9
```

e)
```
1    CREATE ASSERTION classWithSameName (
2        EXISTS (
3            SELECT * FROM Ships WHERE class = name
4        )
5    );
6
```

16.
```
1    CREATE Table MovieExec (
2        ...
3        FOREIGN KEY (cert#) REFERENCES Studio(presC#)
4            CHECK (presC# = cert#),
5        CHECK (networth < 10000000)
6    );
7
```

Correct Solution:

```
1    CREATE Table MovieExec (
2        ...
3        FOREIGN KEY (cert#) REFERENCES Studio(presC#)
4            CHECK (presC# = cert#),
5        CHECK (networth < 10000000)
6    );
7
```

17.
```
1    CREATE TRIGGER NetWorthTrigger
2    AFTER UPDATE OF netWorth ON MovieExec
3    REFERENCING
4        OLD ROW AS OldTuple,
5        NEW ROW AS NewTuple
6    FOR EACH STATEMENT
7    WHEN (5000000 > (SELECT SUM(netWorth) FROM MovieExec))
8    BEGIN
9        DELETE FROM MovieExec
10        WHERE (name, address, cert#, netWorth) IN NewStuff;
11        INSERT INTO MovieExec (SELECT * FROM OldStuff);
12    END;
13
```

Notes:

- Trigger
  - Is also called *event-condition-action* rules
  - are only awakened when certain events, specified by the database programmer occur

    – If condition is satisfied, the *action* associated with the trigger is performed

      <u>**Example:**</u>

```
1     CREATE TRIGGER NetWorthTrigger
2     AFTER UPDATE OF netWorth ON MovieExec
3     REFERENCING
4         OLD ROW AS OldTuple,
5         NEW ROW AS NewTuple
6     FOR EACH ROW
7     WHEN (OldTuple.netWorth > NewTuple.netWorth)
8         UPDATE MovieExec
9         SET netWorth = OldTuple.netWorth
10        WHERE cer# = NewTuple.cert#;
11
```

18. a)
```
1     CREATE TRIGGER CheckPriceTrigger
2     AFTER UPDATE OF price ON PC
3     REFERENCING
4         OLD ROW AS OldTuple,
5         OLD TABLE AS OldStuff,
6         NEW ROW AS NewTuple
7     FOR EACH STATEMENT
8     WHEN (NewTuple.price <> OldTuple.price AND
9           NOT NewTuple.speed IN (
10                SELECT * FROM PC AS pc
11                WHERE NewTuple.price < pc.price AND
12                NewTuple.speed = pc.speed
13          ))
14        UPDATE PC
15        SET price = NewTuple.price
16        WHERE model = NewTuple.model;
17
```

<u>**Correct Solution:**</u>
```
1     CREATE TRIGGER CheckPriceTrigger
2     BEFORE UPDATE OF price ON PC
3     REFERENCING
4         OLD ROW AS OldTuple,
5         OLD TABLE AS OldStuff,
6         NEW ROW AS NewTuple
7     FOR EACH STATEMENT
8     WHEN (NewTuple.price <> OldTuple.price AND
9           NOT EXISTS (
10                SELECT pc.speed FROM PC AS pc
11                WHERE NewTuple.price < pc.price AND
12                NewTuple.speed = pc.speed
13          ))
14        UPDATE PC
15        SET price = NewTuple.price
16        WHERE model = NewTuple.model;
```

```
17
```

b)
```
1    CREATE TRIGGER CheckPriceTrigger
2    BEFORE INSERT ON Printer
3    REFERENCING
4        NEW ROW AS NewTuple
5    FOR EACH ROW
6    WHEN (NewTuple.model IN (
7        SELECT model FROM Product
8    ))
9        INSERT INTO Printer
10           NewTuple;
11
```

c)
```
1    CREATE TRIGGER CheckPriceTrigger
2    BEFORE INSERT ON Printer
3    REFERENCING
4        NEW ROW AS NewTuple
5    FOR EACH ROW
6    WHEN (NewTuple.model IN (
7        SELECT model FROM Product
8    ))
9        INSERT INTO Printer
10           NewTuple;
11
```
