1 Intro to Transactions

- Transaction

    - **Syntax:** BEGIN TRANSACTION; or BEGIN;
        * Turns off autocommit and begins a transaction
    - **Syntax:** COMMIT;
        * Sallves all results of the statements at the begininng of transaction to disk
    - Makes a batch of process atomic
        * All are processed before being committed
        * If power loss occurs during processing, no data is saved to database
